

Term 3 in Pre-primary

Mathematics

We love using manipulatives when solving problems in Mathematics. This term we have begun to solve simple addition and subtraction problems. We have used concrete materials to help our thinking. We have seen great improvement in our understanding and our numeral formation is fantastic. We love playing number games on the Interactive Whiteboard to consolidate our new skills.

We are always investigating in Pre-primary. We love exploring colours, creating masterpieces, and designing props to complement our imaginative play.

English

This term we have focused on beginning writing skills. We started the term writing consonant-vowel-consonant words and finished the term with dictation sentences. We are so proud of our achievements! For two terms we have been reading decodable books. These books give us the confidence to try out our newly acquired skills with success. Each week we have completed activity retells. We create something fun... like butter as you can see in the picture below! Then we write about what we made, what we used, and how we contributed.
